🎓 EDUCATION

Sun Yat-sen University (SYSU), Shenzhen, China

2021 – 2025

Bachelor in Economics

📋 RESEARCH PROJECTS

“Corporate Challenges in the Face of Black Swan Events: A Difference-in-Differences Analysis of the Medium- and Long-term Impact of COVID-19 on Chinese Listed Companies”

(with Zeqing Yang, In Chinese)

Sep. 2023 – Jan. 2024

In this project, we used the Difference-in-Differences (DID) method to examine the medium- to long-term effects of COVID-19 on total factor productivity (TFP) among 2,368 A-share listed companies in China from 2016 to 2022. The study found that COVID-19 caused a significant 3% decrease in TFP, especially in heavily impacted areas. Our analysis also revealed that the primary mechanism behind this decline was a reduction in labor productivity. Notably, the pandemic had an even more pronounced effect on state-owned enterprises (SOEs) and private firms with political resources compared to private firms without such resources.

“Environmental Regulation and Corporate Dynamic Exit: An Empirical Study Based on the Air Pollution Policy”

(with Zhanyu Dong & Jingjing Chang, In Chinese)

Feb. 2024 – June. 2024

This study, based on industrial and commercial registration data from 2009 to 2017, constructed county-industry-time panel data to investigate the dynamic impact of the “Air Pollution Prevention and Control Action Plan” on firm exits. We found that in the short term, the policy led to an accelerated exit of smaller firms, expediting the phasing out of outdated capacity. In the long term, it reduced the number of business license revocations, laying a solid foundation for industrial upgrading. This research deepened my understanding of the intricate relationship between policy intervention and market response.

“Safety or Efficiency? Government Regulation, Workplace Accidents, and Corporate Performance”

(with Zhanyu Dong, In English)

Sep. 2024 – Present

- In progress
- This paper explores county-level government behavior under a simplified multi-task governance framework balancing economic growth and safety. Using nationwide data on major workplace accidents (2007–2016) matched with firm-level tax survey data, it constructs a firm-county-year panel and applies a multi-period DID approach to identify regulatory shocks triggered by the first accident in each county. Results show that such accidents significantly reduce firms’ taxable income and net profit, driven by stricter local regulations. The negative impact is stronger for smaller firms, in more severe accidents, and under greater media

exposure. Event-study tests confirm the robustness of the findings. The study contributes to understanding grassroots governance trade-offs and offers policy insights for balancing safety and efficiency in official evaluations.

📖 RESEARCH EXPERIENCE

Research Assistant to Asst. Prof. Dandan Zhu

Oct. 2022 – Nov. 2023

Sun Yat-sen University(SYSU)

- **Field collection of questionnaires:** Conducting field research in Shenzhen and Guangzhou, designing and distributing questionnaires to ensure the representativeness and validity of the data.
- **Organize questionnaires:** Organize and code the collected questionnaire data to ensure the accuracy and completeness of the data.
- **Literature collation:** Collect and collate cutting-edge literature in related fields to provide theoretical support and background information for the study.

Research Assistant to Asst. Prof. Zhanyu Dong

Jan. 2024 – Jun. 2025

Sun Yat-sen University(SYSU)

- **Data cleansing:** Cleansing and processing large amounts of corporate data using Stata and Python to ensure data availability and consistency.
- **Master regression analysis:** Using DID regression models to analyze the impact of environmental governance programs on firms' relocation and bankruptcy, and exploring the causality of policy effects.
- **Article writing:** Participated in the writing of the paper, responsible for writing some chapters and interpreting the results of data analysis.

Research Assistant to Asst. Prof. Fangda Ding

Dec. 2024 – Feb. 2025

The University of Hong Kong(HKU)

Chinese Officials Database (COD)

- **Data collection:** Systematically collecting data on government officials from 2017 to the present, including information on posting experience, gender, and educational background, to ensure the comprehensiveness and accuracy of the data.
- **Data organization and management:** Use Excel and Stata to organize and manage the collected data, and build a database to support subsequent analysis.

⚙️ SKILLS

- Programming Languages: Stata > Python == ArcGIS
- Office Suite: Word == Excel > PowerPoint
- Languages: Mandarin(Native Speaker) > English(IELTS 6.5)
